

## Case Study: Bodyshop Facilities

**Project:** Bodyshop Facilities

**Contractor:** A UK-based car supermarket operation.

**Project Brief:** To design and manufacture an upgrade to the client's bodyshop facilities.

### Facility comprising of:

- 4 off combination booths
- 2 off wheel booths
- Paint mix room
- Gun clean room

### Plant Features:

- Full downdraught airflow
- Direct gas fired plant
- Flash off systems
- LED lighting throughout

Our client, an existing customer, had decided to upgrade their bodyshop facilities. As a busy car supermarket operation the new plant had to be up and running in a short space of time to ensure that there was no break in painting operations.

The new plant features combination Spraybooth / ovens with high velocity air blowers utilised on the flash off cycle.

In addition, two wheel bays and paint mix and gun clean rooms are included to complete the process. The equipment is highly efficient and easy to operate in this high volume environment.

We installed the entire plant within the tight timescale to ensure that the workshop continued without disruption.
