

Case Study: Vehicle Spraybooth

Project: New Spraybooth Facility

Client: Vehicle Repair Specialist

Project Brief: To provide a new vehicle repair spraybooth to our client in South Wales

We manufactured and installed a new spraybooth for our customer in South Wales who ordered a new unit for their specialist vehicle repair facility.

The current climate with lockdown measures in place across the country made the job more difficult than usual due to social distancing and having to travel from Staffordshire to South Wales each day as hotels were closed. Despite this, however, the spraybooth was installed on time and our client could resume normal operations with as little disruption as possible.

Our customer had high praise for our installation team and Chris the owner said:

“just a quick message to say thank you very much for my booth the whole experience dealing with yourselves and Unitech as a company has been a pleasure. The quality of manufacture and design is second to none”.
